

pt of view - observation of nature (victory gardens) plant against pest, one must root for successful flowerfruit and seed or for the satiated appetite of bug. 'Olympian' pt of view dulls fight for life.

single pt of view establishes a fixed system of coordinates that equalizes static and dynamic objects -

also multiplies shapes to infinite as a complex object - pt of view is created. When sculpture gives you 'a face' pt gives you face + a pt of view. . . face + 6 pt of view etc. . . so face + n pt of view which explains that the pter tends to do w. very few primary forms (cone sphere cylinder) as they are multiplied by infinite bits of

for each form) for each scale. the choice of pt of view happens on the surface of a circumscribe globe
